Once you've done it:

1. Submit the score into the Google Form.
2. Update your weekly review tracker with **targets**.

Warships

CAP 1 Skeleton Program

Paper 1 - Programming Paper

For the **Paper 1 exam** (practical exam) you will be given a large amount of pre-released code to study before hand (a.k.a. *skeleton program*)

During the exam you will be asked questions on this code and asked to make changes to it

Changing other people's code is a difficult task and will take practice

CAP 1

Week beginning 9th February

Topic list:

- Part 1: Databases Theory
- Part 2: Changes and questions based on *Warships* skeleton program

Battleships

The Warships program is roughly based on the Battleships game.

Discuss with the people near you, what do you know about the game? What are the rules?

Warships

All files are on **Classroom**:

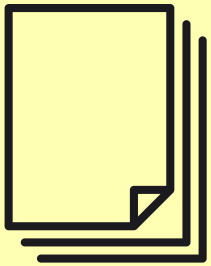
1. **“SkeletonProgram”** needs to be copied into a new C# project
2. Copy of **“Training.txt”** text file put in `bin\debug` folder.
3. Open **“Preliminary material”**
4. Try the code and make sure it runs. When it runs try it in training mode to make sure the text file is working

Warships

In pairs come up with:

- 😃 A list of features that the code enables
- 😢 A list of what could need improving in the game
- 🙃 **EXT:** A list of functions and properties that have been programmed strangely.

Structure Diagrams



```
static void Times4(ref int num)
{
    int y = 4;
    num = Multiple(num, y);
}

static int Multiple(int num1, int num2)
{
    return num1 * num2;
}

static void AddOne(ref int num)
{
    num++;
}
```

```
static void Main(string[] args)
{
    int x = 5;
    AddOne(ref x);
    Times4(ref x);
    Console.WriteLine(x);
    Console.ReadKey();
}
```

Warships Structure Diagram

In groups of 3 you are going to create a diagram of how all the code fits together.

You need to:

- List each subroutine
- Arrange them on the whiteboard so that you can draw arrows showing which subroutines are called from where
- Annotate the arrows with parameters as appropriate

HINT: Do not glue anything down until you are sure it is the in the right place!

Investigation

`SetUpBoard`

Investigation

`SetUpBoard`

1. What does `ref char[,] Board` mean?
2. Why is it not needed?
3. What does the function do?
4. Why do we not see the dashes when the board is displayed?

Changes to the Code

The best way to get to know the code is to start making changes to it

Let’s look at adding summary notes to functions.

Changes to the Code

The best way to get to know the code is to start making changes to it

Let's look at adding summary notes to functions.

As you make changes, add **comments** to remind yourself what you have added… **and why**

List of changes to make today are on BPCompSci:
W122 – C# Warship changes 1
